

# alka-haul™

## multi-source kh buffering

Alka-Haul Reef and Alka-Haul Freshwater targets and maintains important alkalinity values much longer while boosting all biological integrity throughout the system from top to bottom.

1. Multi-source formula
2. Longest lasting KH stability
3. Calcium and Magnesium infused
4. Enhances all biological activity
5. 60% less dosage than other buffers

**1** gram      For **1** dKH  
55 liters (14.5 US gallons)

**Size**  
236 ml (8oz)

# alka-haul™

The Alka-Haul alkalinity buffering system is tailor made for extended KH balance that no other buffer can match. Instead of containing just one or a few different alkalinity sources, Alka-Haul contains a myriad of alkalinity sources and is available for reef and freshwater environments.

What makes **Alka-Haul Reef** special is not only its ability to keep alkalinity and pH values steady. Because it contains so many alkalinity sources, it brings advantages to biological functions that other buffers can't. From corals to microbes, Alka-Haul enhances activity all over the reef.

**Alka-Haul Freshwater** provides the same long lasting stability as Alka-Haul Reef, but also offers precious Ca and Mg values that otherwise are hard to achieve in freshwater environments. This makes them terrific companions products to ATM Colony, efficiently raising KH when necessary for cycling new systems. It also provides a needed calcium source to aid ATM Agent Green in phosphate removal in freshwater systems.

## Maximum Efficiency

Add **1** gram For **1** dKH  
55 liters (14.5 US gallons)
