

# outbreak!™

## premium biological ma

The common nuisances in aquarium keeping can be traced right to the amount of organics present in the system. Easily the most concentrated and powerful organics consuming bacteria product on the market, Outbreak! lives up to its claims.

1. Consumes Organics
2. Enzymes prevent odor release
3. Inhibits NO<sub>3</sub> and PO<sub>4</sub> release
4. Fortifies bacteria population
5. More beauty

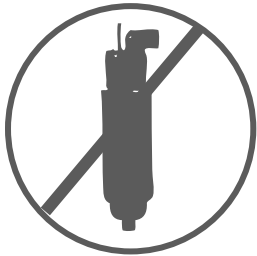

Formula	Size	Treats
Freshwater	118 ml	302 L
Freshwater	236 ml	605 L
Freshwater	473 ml	1,211 L
Freshwater	946 ml	2,422 L
Freshwater	3.79 L	9,688 L
Marine	236 ml	605 L
Marine	473 ml	1,211 L
Marine	946 ml	2,422 L
Marine	3.79 L	9,688 L

# outbreak!™

It doesn't take long for the aquarist to understand the value of keeping as little organics as possible in the aquarium. There are various ways of controlling organics, but often times only nature provides the most efficient methods, with billions of years of research and development on its side!

By controlling organics, you control the ecological and aesthetic qualities of your tank. Because Outberak!'s bacteria can function in aerobic and anaerobic conditions, organics can run but they can't hide. The result is a dramatic reduction of NO<sub>3</sub> and PO<sub>4</sub> release into the water column through the most important practice in aquatics: *prevention*.

## PROCEDURE

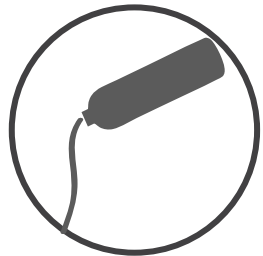

Turn off UV sterilizer, protein skimmer, and ozone generator

Detoxify new tap water (if in concert with water) with ATM Barrier or ATM Paradigm

Shake bottle vigorously

Add recommended dose of Outbreak! straight into the system

After four days it is safe to turn on UV sterilizer, protein skimmer, ozone generators, and perform water changes.
